

- ROWS BETWEEN UNBOUNDED PRECEDING AND CURRENT ROW

UNBOUNDED PRECEDING

➔ Means: Start from the **very first row**.

CURRENT ROW

➔ Means: Stop at the current row

So, SQL keeps adding:

First row

First + Second

First + Second + Third

First + Second + Third + Fourth

.....

➔ That's why it is called a **cumulative/running total**.

E.g.: Display cumulative order amount in ascending order of amount

```
WITH T AS
(
  SELECT
    ORDERID,
    CNAME,
    AMOUNT,
    SUM(AMOUNT) OVER
    (
      ORDER BY AMOUNT
      ROWS BETWEEN UNBOUNDED PRECEDING AND CURRENT ROW
    ) AS Cumulative Amount
  FROM CUSTOMER
)
SELECT *
FROM T
ORDER BY AMOUNT;
```

ORDERID	CNAME	AMOUNT	Cumulative Amount
104	NEHA	8000	8000
103	AMIT	12000	20000
102	PRIYA	25000	45000
106	RIYA	30000	75000
107	MEHUL	40000	115000
108	KRUNAL	40000	155000
105	VISHAL	45000	200000
101	RAHUL	65000	265000
